

REDESIGNED FILE DRAWER BODIES

LabTech Midwest is pleased to announce a significant improvement in our file drawer body design.

Prior to February 2010 file drawers shared similar construction with deep drawers. The new design is unique to the file drawers, provides taller drawer sides and hanging file folder hardware (file bars). The new file bars provide accommodation for back to back and side to side file orientation. The only exceptions are 15" wide units, which include file bars for side to side orientation only. The file bars fit into notches for both legal and letter size hanging file folders.
